For: METHOD FOR SEROLOGICAL TYPING USING TYPE-SPECIFIC ANTIGENS

AMENDMENT UNDER 37 CFR § 1.116

Commissioner for Patents
Washington, D.C. 20231

November 2, 2001

Sir:

In reply to the outstanding Advisory Action dated August 29, 2001, please amend the application as follows:

IN THE CLAIMS:

45. A method of detecting the presence or absence of an antibody against hepatitis C virus in a sample liquid, the method comprising the following steps:

(a) incubating said sample liquid which may contain an antibody against hepatitis C virus with two peptides P1 and P2, wherein the peptide P1 consists of (1) an isolated immunologically active amino acid sequence from the hepatitis C virus consisting of 6-22 amino acids from one of SEQ ID NOs: 12-16; (2) an immunologically inactive spacer region coupled to the immunologically active sequence; and (3) a solid phase binding group which permits an antibody bound to the immunologically active amino acid sequence to be separated from the sample liquid; and the peptide P2 consists of (1) an isolated immunologically active amino acid sequence from the
